User Guide: Project Purchase Order against WBS

Version 1.2 | Prepared by: IT ERP Team with implementation partner | Applies to all companies using Project management module

When to use

Use this process when the material or service must be charged to a project budget, for example civil work, site material or project equipment. For normal purchases use the standard PO process.

Before you start

Check with the project controller that the project is in stage **In process**. A PO cannot be created for a project in **Created** or **Finished** stage. Also note the activity number from the WBS for the task you are buying for.

Steps

1. Project management and accounting > Projects > All projects. Open the project and check the stage.

2. Open Plan > Work breakdown structure. Note the activity number (for example A-0012).

3. Procurement and sourcing > Purchase orders > All purchase orders > New.

4. In the header select the **Project ID**. The PO is now linked to the project.

5. On every line enter the activity number and select the project category (e.g. Civil Material, Steel, Labour).

6. Save and Submit for approval. System will check remaining budget for that activity.

If budget check fails

The PO cannot be submitted. Do not create the PO without project ID as a workaround. Ask the project controller to do a budget revision first, then submit again.

Revision history

Ver	Date	Change
1.0	05-Nov-2025	First issue after go-live
1.1	20-Jan-2026	Added budget check section
1.2	18-May-2026	Updated screenshots for new D365 version
